Electronic Door Lock

Smart Lock Pro S

Main advantages:

- Seamless and user-friendly operation for daily use.
- Elimination of traditional mechanical keys.
- Capability to activate service mode for unlocking during loading, unloading, or servicing of the semi-trailer.
- Adherence to cargo security standards set by TAPA and BAT.

Control methods:

- Manual operation by the driver using the keyboard and indicator on the semi-trailer.
- Remote control from the client's office through the telemetry platform and GSM module.

The code changes:

- Upon receiving the "Change Code" command via the GSM module from the platform to the Smart Lock Pro S.
- Triggered by entering an incorrect code three consecutive times on the keypad.

Automation:

- The lock is automatically engaged 10 seconds after the doors are closed.
- If the lock is unlocked and the door is not opened within 5 minutes, the lock is automatically engaged.

Emergency Opening:

- Redundant electronic lock system with independent autonomous power and a confidential code for emergency unlocking.

Code generator comparable to the ones employed in banking institutions is always available in your office.

NTT
New Transport Technology

Additional Features:

- Alarm function with audible alert triggered upon door opening or activation of additional sensors* while the lock is in a secured state.
- Automatic activation/deactivation of the alarm when the lock is locked/unlocked.
- Automatic lock engagement upon exiting a pre-defined geolocation zone*.

Installation and Maintenance:

- Intuitive lock installation requiring no specialized training for personnel.
- Installation takes only 2 hours with the involvement of two technicians.

Integration:

- Seamless and rapid integration through the customer's GSM module inputs/outputs.
- Capability to control the lock via the GSM module and the NTT platform on a computer or smartphone.
